- MySQL

APIs :

- RESTful APIs for service integration

Version control :

- GitHub

Technologies Used

Team members and contribution:

- **Vigneshwar S :**

Project Management: Led team meetings and tracked progress.

Front-End Development: Developed responsive UI with HTML, CSS, and JavaScript.

Back-End Development: Contributed to specific back-end functionalities.

Data Curation: Compiled data sets for assigned services.

- **Badri P :**

Web Design: Designed optimal web application layout.

Front-End Development: Developed responsive UI with HTML, CSS, and JavaScript.

Back-End Development: Supported back-end for Finance services.

Data Curation: Created and organized data sets for assigned services.

- **Marishwaran A :**

Security Implementation: Secure login with user/password and SQL database.

Information Architecture: Established data organization system.

Front-End Development: Ensured UI responsiveness.

Data Curation: Compiled data sets for assigned services.

- **Bavadharini S :**

Front-End Development: Developed responsive UI for Transportation services.

Back-End Development: Developed back-end functionalities for Transportation services.

Data Curation: Compiled and organized data sets for Transportation services

- **Jinapriya S :**

Front-End Development: Developed responsive UI for Health services.

Back-End Development: Developed back-end functionalities for Health services..

Data Curation: Created and organized data sets for Health services.

Conclusion :

- **Integrated Service Platform:** Streamlines access to essential services in government, transportation, health, and finance.
- **Modern Technologies:** Leverages advanced technologies for efficiency.
